

# BOILER SERVICES

1. New erection projects
2. Outage services
3. Maintenance planning and execution
4. Pressure part erection and repairs
5. Flue and duct erection and repairs
6. Air heater erection and repairs
7. SCR erection and repairs
8. Scrubber erection and repairs

ME&I provides turn-key erection and repair capabilities for boiler services. Our Field Service Engineers inspect all equipment that needs to be examined and carry out trouble shooting where necessary. This attention to detail allows ME&I to prepare an engineered repair plan that is both efficient and economical.

Once the inspection services are complete, a fluid transition is done with our team to execute repair or erection. Our skilled team of welders, pipe fitters, machinists and field engineers ensure the work is completed in the safest, most efficient, and cost-effective manner. We can match your facility up with a particular field engineer and service team to ensure continuity through any project that is taken on. Our team can assist in planning future maintenance and outages, so the facility is kept in top operating condition and ultimately minimize downtime and maximize safety.

Our technicians are fully qualified to work on any part of a boiler system on the boiler island. From the fuel source coming in (solid, liquid or gas) to the flue gas coming out of the stack, we provide engineers and personnel to meet any project requirements. Pressure parts for feedwater systems, boiler proper and steam exiting the unit will be managed by industry-leading pipefitters, welders and machinists. Flues and ducts, air heaters, SCRs and scrubbers will be handled with years of erection and repair experience from skilled field service engineers and labor for these specific projects.

Safety is engrained in our culture, and is integral to every aspect of our business. We drive an incident-free workplace, engaging with our workforce to ensure they feel competent at identifying accident hazards, while also feeling empowered to speak up if they identify an unsafe act. While we protect our people, we are also acutely aware of our responsibility to protect our communities and the environment in which we work. ME&I is a target zero company. Our employees and contractors must sign our Commitment to Safety documents before performing any work for the company. Using industrial safety standards such as Safety Conscious Work Environment (SCWE), Behavior Differentiation (BD), and Human Performance (HuP), we hold our employees and contractors to some of the strongest safety programs in the industry. Our goal is to ensure that we pick up on any leading indicators and take corrective and preventative action.
