5. Basic and advanced drilling
6. Stud removal and repair
7. Boring
8. Milling

ME&I offers machining services for a vast range of projects in your facility. From specialty parts manufacturing in our shop, to on-site machining services when a quick response is needed, ME&I is able to offer skilled machinists to execute your work scope.

Our machining services pair flawlessly with our pipeline and valve repair services. We have the ability to machine removable valve parts in our shop or in the field, as well as piping repair, replacement, or refacing of any issues that are coming into the valve bodies themselves.

ME&I Field Machining Services provide cost-effective modification and repair of a variety of parts and equipment, on-site and in-place, 24-hours a day. Ideal for new construction projects, modifications, planned shutdowns and emergency repairs, our comprehensive equipment has the capacity to mill, bore, trepan, drill or deliver any other machining activity associated with a premier machining workshop. We understand that a one-size-fits-all approach simply does not work in field machining, so our experienced team is dedicated to formulating a safe and efficient repair procedure that minimizes downtime and ensures a quality repair that will allow your facility to get back up and running as quickly as possible.

Safety is engrained in our culture, and is integral to every aspect of our business. We drive an incident-free workplace, engaging with our workforce to ensure they feel competent at identifying accident hazards, while also feeling empowered to speak up if they identify an unsafe act. While we protect our people, we are also acutely aware of our responsibility to protect our communities and the environment in which we work. ME&I is a target zero company. Our employees and contractors must sign our Commitment to Safety documents before performing any work for the company. Using industrial safety standards such as Safety Conscious Work Environment (SCWE), Behavior Differentiation (BD), and Human Performance (HuP), we hold our employees and contractors to some of the strongest safety programs in the industry. Our goal is to ensure that we pick up on any leading indicators and take corrective and preventative action.
