

PIPELINE SERVICES

1. Design and erection of new pipeline systems
2. Demolition of existing systems
3. Removal and installation of valves
4. Specialty welding services for all alloy material
5. Pipeline system cleaning, inspection and testing
6. Erection and installation of spool pieces (shop or field)

With a strong connection to some of the best names in the pipe fabrication industry, ME&I holds a distinct advantage entering the market.

EnerMech is a global leader in pipeline projects and boasts a heritage of over 40 years. Lending their expertise to the industry expertise that ME&I already brings to a project further sets us apart from the competition. We are able to design, fabricate and install complete pipeline systems for any type of fluid in process. Utilizing our partnership with EnerMech and our own engineering resources, we are also able to do any type of cleaning, inspection and testing of any pipeline system on facility.

Having developed various specialized welding procedures for all kinds of alloy, ME&I is uniquely qualified to perform any welding requirements. These unique qualifications save our customers and partners time and money by not having to bring on multiple contractors to perform various work scopes on a single jobsite. Any of this welding can be done manually using GTAW, FCAW, GMAW, or SMAW techniques, or done via specialty orbital welding (direct and/or indirect). ME&I can also deliver specialty welding procedures that promote cleaner, more effective welds, such as Surface Tension Transfer (STT), Waveform Control Technology and TIP TIG, which is a semi-automatic high-deposition metal transfer (HDMT®) variant of the manual TIG welding (GTAW) process.

Safety is engrained in our culture, and is integral to every aspect of our business. We drive an incident-free workplace, engaging with our workforce to ensure they feel competent at identifying accident hazards, while also feeling empowered to speak up if they identify an unsafe act. While we protect our people, we are also acutely aware of our responsibility to protect our communities and the environment in which we work. ME&I is a target zero company. Our employees and contractors must sign our Commitment to Safety documents before performing any work for the company. Using industrial safety standards such as Safety Conscious Work Environment (SCWE), Behavior Differentiation (BD), and Human Performance (HuP), we hold our employees and contractors to some of the strongest safety programs in the industry. Our goal is to ensure that we pick up on any leading indicators and take corrective and preventative action.
